

# Environmental Policy Statement

Yuill is an innovative multi-award winning House Builder who has built over 300,000 homes in the North East Region, delivering quality and bespoke property solutions.

Yuill recognises, like all organisations that business activities, products and services can have an adverse effect on the environment.

Yuill is committed to managing its products, activities and services that could potentially harm the environment in a responsible and effective way. Yuill shall also continually endeavour to improve their environmental performance, in line with other business objectives and will regularly set documented objectives and targets and monitor progress in achieving them.

In seeking to minimise harmful environmental impacts associated with activities Yuill will:

- As a minimum standard, seek to comply with all applicable environmental legislation and other requirements.
- Strive to prevent pollution through proper treatment and management of wastes arising from our activities and services, whether they are discharged to air, land or water.
- Manage all aspects of products, activities and services in such a manner to minimise unnecessary or avoidable consumption and waste.
- Where practicable, work with clients to develop sites, take into account environmental protection during the design phase of our projects, and reduce environmental impact when working on site.

This document is communicated to all employees and those working on behalf of Yuill, and is made available to the public. It shall be the responsibility of all employees to ensure that the policy is applied at all times.

David Mullins, Managing Director
